

Crunchbase Scraper

User Guide

Turn a list of company websites into a spreadsheet of company info.

A simple desktop tool - no installation, no coding.

Version 3 - June 2026

1. What this tool does

You give it a list of company websites (like openai.com). It opens Crunchbase for each one, reads the company's public profile, and collects everything into a neat spreadsheet you can open in Excel.

What you get for each company

- Company name and Crunchbase link
- Address (city, region, country)
- Growth score
- Funding total - e.g. \$128,740,377,627 (128.7B)
- Acquired? - 'No', or 'Yes - <who bought it>'
- Whether it has recent news, and how many key people are listed
- Key people (founders / executives), with their socials if you ask for it

Everything is also saved automatically, so you never lose your work.

2. Getting started

What you need

- A Windows PC with Google Chrome installed. That's the only requirement.

Run it

1. Unzip the folder you were given (e.g. right-click the .zip -> Extract All).
2. Open the folder and double-click CrunchbaseScraper.exe
3. A small black window opens and stays open. THAT WINDOW IS THE PROGRAM - do not close it while you work.
4. Your web browser opens automatically at `http://127.0.0.1:5000` - that is the screen you will use. (If it doesn't open, type that address in your browser.)

If Windows shows a blue 'Windows protected your PC' warning

That is normal for a new app. Click 'More info', then 'Run anyway'. The tool is safe - it just runs on your own computer.

To stop the program later, simply close the black window.

3. Doing your first run

The screen has a control panel on the left and your results on the right. For a normal run you only need three things: paste websites, (optionally) log in, and press Start.

The main screen (the numbered items are explained below).

#	DOMAIN	STATUS	COMPANY	ADDRESS	GROWTH	FUNDING	ACQUIRED	NEWS	PEOPLE
No run yet.									

LIVE LOG

1 Company websites

Paste the websites you want, one per line (or separated by commas). You can also click 'Choose File' to upload a .txt or .csv list instead.

2 Log in to get funding totals

Optional but recommended. Tick this and type the Crunchbase account email + password to unlock funding totals. See section 4.

3 Start

Press it and the tool gets to work. A Chrome window opens and does everything by itself - just leave it open until it finishes.

4 Advanced options

Click to open extra settings (speed, people, proxy, etc.). Most people never need these. See section 6.

5 Download results

After a run, download your data as Excel or JSON. (It is also auto-saved - see section 7.)

While it runs, the right side shows a progress bar, a live table that fills in row by row, and a live log of what's happening.

4. Logging in (for funding totals)

Crunchbase only shows a company's total funding to logged-in users. If you want that figure, use a logged-in session:

1. Tick 'Log in to get funding totals'.
2. Type the account email and password in the two boxes.
3. Press Start as usual - the tool signs in for you automatically.

Good to know

- It only logs in once. After that it remembers the session, so later runs skip the login step automatically.
- Your settings (account, options) are remembered between sessions - only the website list starts empty each time.
- If a company genuinely has no funding figure (e.g. a public company), the Funding cell is simply left blank - it no longer says 'login required'.
- If you leave the email/password blank but still tick the box, a Chrome window opens so you can sign in by hand once; it is then remembered.

5. Reading your results

Each website becomes one row. Here is an example run:

A finished run with three companies.

LIVE LOG

```
[10:01] Run started: 3 domain(s).  
[10:02] OK - Anthropic  
[10:03] OK - Instagram  
[10:03] Run finished. 2/3 succeeded.
```

1 Status: mismatch

The search found a company, but its website did NOT match the one you typed - so it is probably the wrong company. The row is flagged in amber with an explanation, instead of giving you wrong data. Other statuses: 'done' (success), 'not found', 'error'.

2 Company

The matched company name - click it to open its Crunchbase page.

3 Address

City, region and country.

4 Funding

The total raised, with a short form in brackets - \$128,740,377,627 (128.7B). Blank means no funding figure is available.

5 Acquired

'No' if independent, or 'Yes - <buyer>' if the company was acquired (e.g. 'Yes - Meta').

6. Advanced options

Click 'ADVANCED OPTIONS' (item 4 on the main screen) to expand the extra settings. You can ignore these for normal use - the defaults are fine.

Advanced options expanded.

No run yet.									

LIVE LOG

1 Speed (windows at once)

Run several Chrome windows at the same time to get through a big list faster. 1 = normal. 3 or 4 = faster but uses more memory. Use this for large lists; leave at 1 if unsure.

2 People per company

How many key people (founders, executives) to list for each company. Default 5.

3 Also get each person's socials & email

Visits each person's own page to pull LinkedIn / Twitter / email. More detail, but slower.

4 Proxy

Optional. Routes traffic through another IP so very large runs are less likely to be blocked. Leave blank if you don't have one.

5 Diagnostic mode

For troubleshooting only - saves technical details and forces a single window. Leave this OFF.

6 Log in manually

Only needed if automatic login fails - opens the Chrome window so you can sign in by hand. The session is then remembered.

Every option explains itself

See the small round 'i' next to each setting? Hover your mouse over it and a short explanation appears - no need to remember anything.

Hovering an 'i' icon shows plain-language help.

7. Where your data is saved

Automatic save (you can't lose your work)

Every run is saved automatically into a 'results' folder, right next to the program. Each run gets its own files, named with the date and time, so nothing is ever overwritten:

- companies_2026-06-17_154230.csv - the company spreadsheet
- people_2026-06-17_154230.csv - the key people
- results_2026-06-17_154230.json - the full data

Files are written as the run goes, so even if the app crashes or is closed, everything collected so far is already on disk. Open the CSV files in Excel.

Manual download

You can also download at any time using the buttons under 'DOWNLOAD RESULTS': Companies (Excel), People (Excel), or JSON.

8. Tips & troubleshooting

For best results

- Work in reasonable batches rather than pasting thousands of websites at once.
- Leave the Chrome window the tool opens alone while it works.
- For big lists, set 'Speed' to 3-4 in Advanced options.

Common questions

- Funding says 'login required': you did not log in. Tick 'Log in to get funding totals' and enter the account.
- A row says 'mismatch': the tool found a different company than the website you typed - double-check that website. The data shown is for the company it found, not necessarily yours.
- Some rows say 'not found': that company may not be on Crunchbase, or the website didn't match any profile.
- It seems slow: Crunchbase limits how fast anyone can pull data. The tool paces itself on purpose. Use Advanced -> Speed for large lists.
- A security check (captcha) appears in the Chrome window: just leave it - the tool clears most automatically. If it asks you to click, do so once.

That's it. Paste websites, press Start, and collect your spreadsheet.
